

## HARDWARE USER INTERFACE KIT

*Make the best interface for your product*

## WHAT IS THE HARDWARE USER INTERFACE KIT (HUI - KIT)?

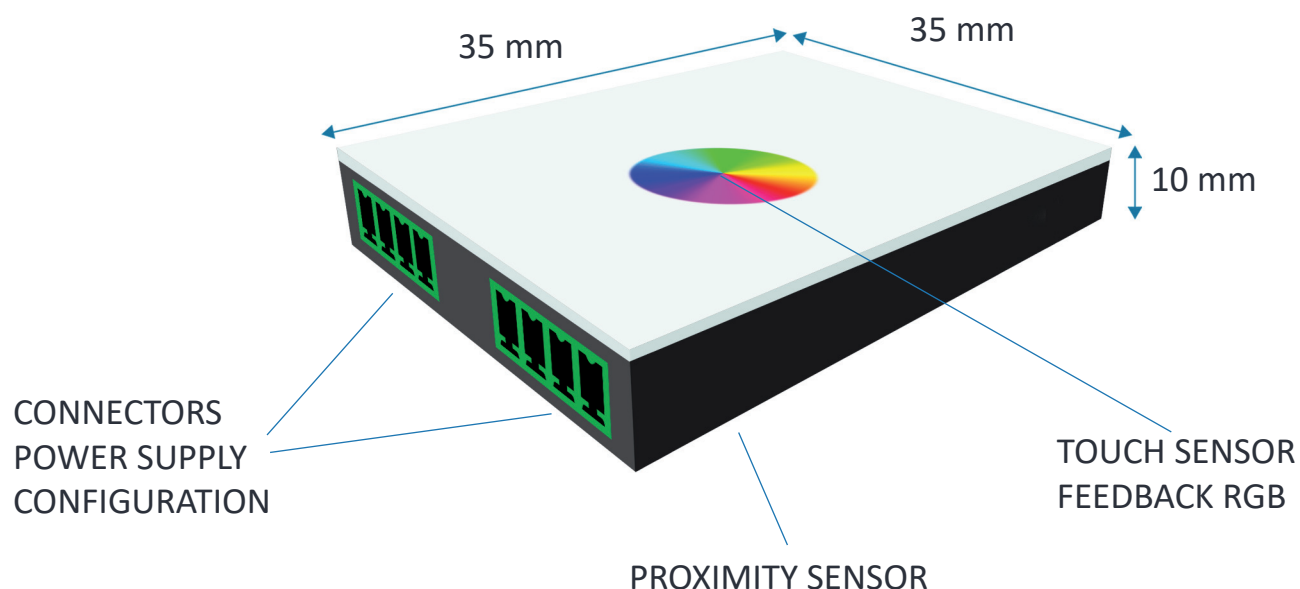

With HUI - KIT, you can build a fast prototype of the user interface and customize it in all parts: design, graphics and feedback.

If the design result does not convince you, you can change everything until you find the perfect solution for the product you are developing.

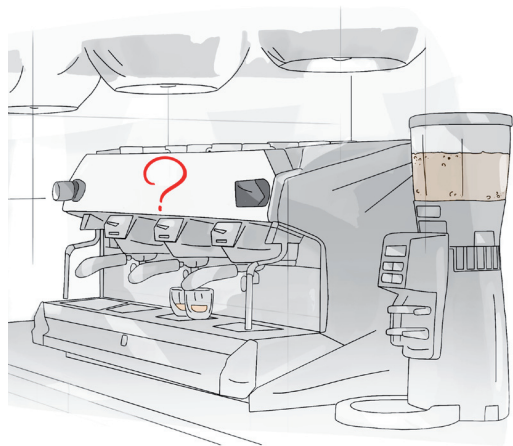

### TOUCH PROBE RGB:

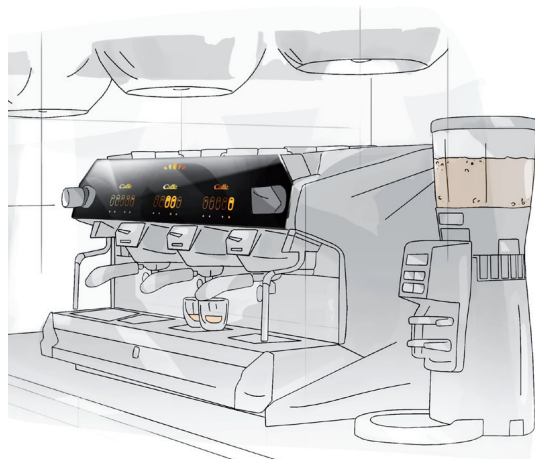

## HOW DOES IT WORK:

### STEP 1

Send us the specifications of your product and how you would like the interface, we will provide you with a specialized rendering on the design you want.

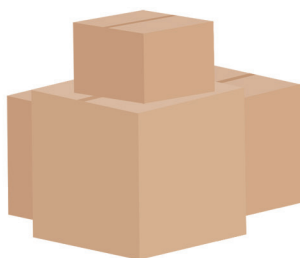

→ èlevit →

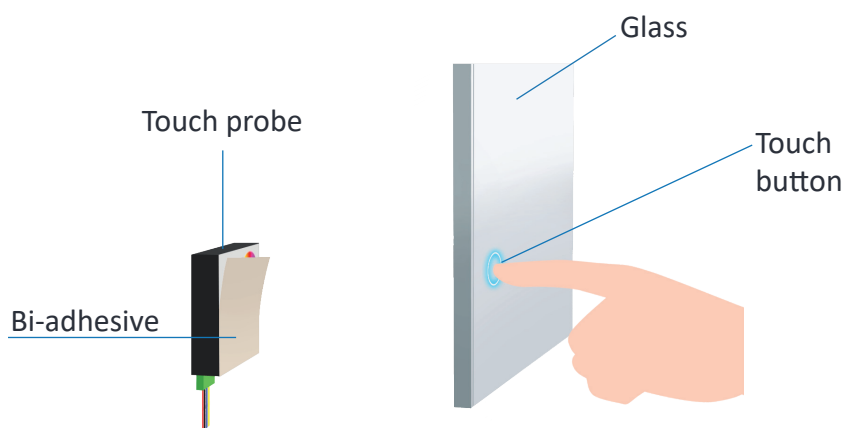

### STEP 2

We ship the glass to you quickly with the interface design of your choice.

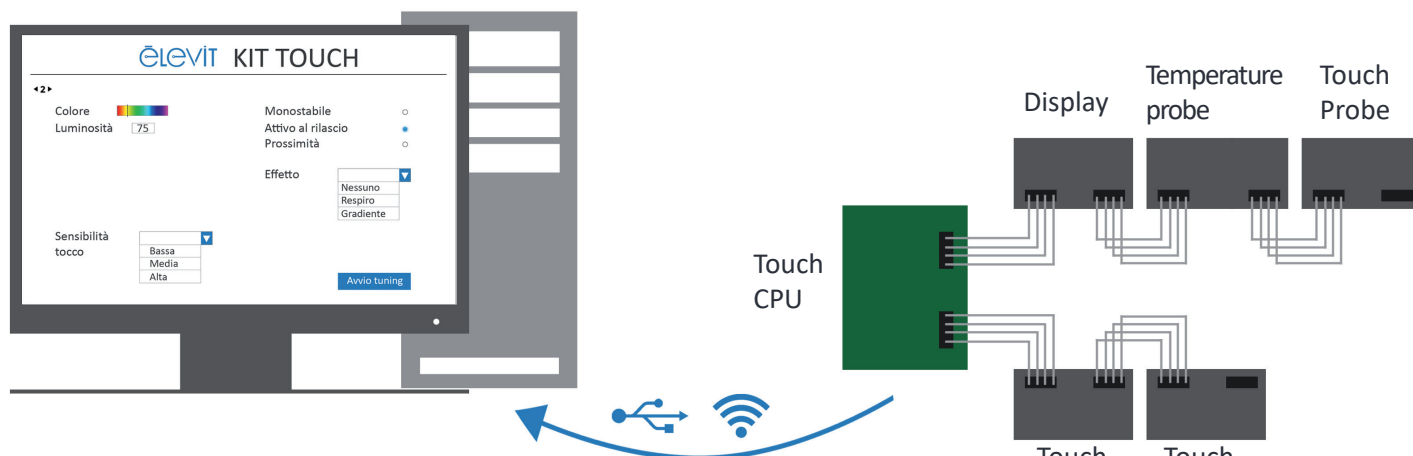

### STEP 3

Merge glass with touch probes.

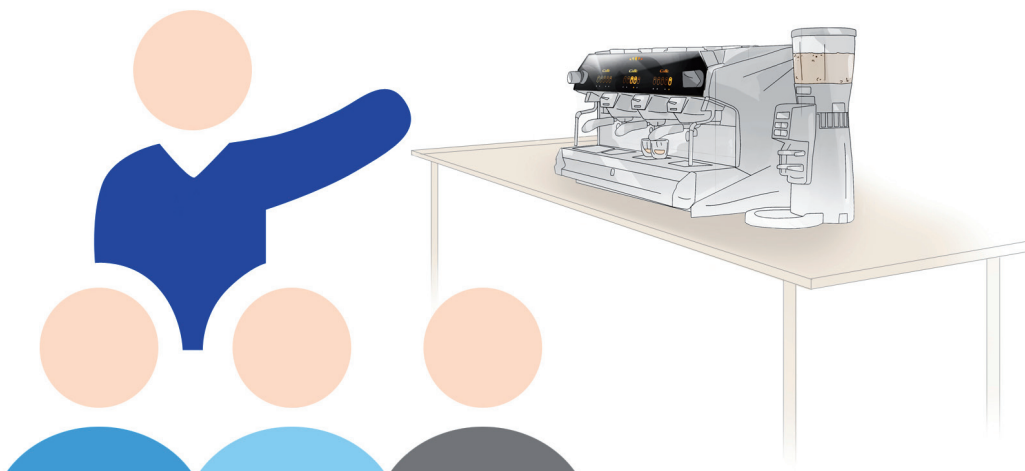

## STEP 4

Connect the touch probe to the Touch CPU and configure the probes and feedback as you prefer via PC.

## STEP 5

Show the solution to the customer and make all the necessary changes in real time.

## STEP 6

If you need changes to the glass design, you can ask us for a new prototype. If otherwise the project has been successful we can continue with the industrialization and mass production of the interface you have developed.
